Started in 2008, the “Leading Edge Japan” has quickly emerged as the premier technology presentation events, offering investors and professionals the chance to discover the latest Japanese innovations in various fields.

Now in its first appearance in Bay Area, Leading Edge Japan is more exciting and informative than ever, with innovative technologies including fast & secure cryptography technology, revolutionary motion detection technology and image processing technology.

The event will be held March 11, 2014 at Nest GSV, which is on Broadway St, Redwood City.

This event is presented by Tokyo University of Science, the top scientific and technological research university in Japan, and supported by JETRO San Francisco.
